

Build 6.1.1470-1611 Release Notes

Build 6.1.1611

App	Area	Type	Comments	Settings	Rights	Required Changes
SPOT	AR	Fix	Selecting "View and Print Statements" for any of the summary lines of the list of hotel statements (e.g. "All Statements") would return no records found when that is obviously not the case.			
SPOT	AR	Fix	Email statements belonging to customers whose configured statement type was ".HTM" were not showing in the preview window or in the email.			
SPOT	AR	New Feature	A "Print Items" button has been added to the Statement View screen and to the Statements tab on the AR-CC tab of Customer View. This will print a report showing a list of items belonging to the invoices posted to the selected statement(s).			
SPOT	AR	Addition to Existing Feature	As an owner, I would like to an option to include statement item details only on certain customers instead of store wide. An "Item Info on Statement" checkbox has been added to the AR-CC tab of Customer View. It enables customer-specific override of the "Store Settings > A/R Settings > Show Item Info on Statements:" setting.			
SPOT	Configuration	New Feature	As a SPOT administrator I would like defaults to appear in certain collections (e.g., split reasons) but I may want to modify those defaults afterwards. The option to apply defaults to a new setting is now enabled. At the present time, Company->Markin->Split Reasons is the only collection to which this applies. Based on user feedback or future needs SPOT will use this feature for other setting collections.	Company Settings->Markin Settings->Split Reasons populate from defaults but are modifiable by the user afterwards.		
SPOT	Configuration	Addition to Existing Feature	As an owner, I would like to change marquee messages for all stores in a centralized utility. Added "Messages" selection to the Menu, to allow a user to select a store, then add/remove/update the marquee messages for that store.		New "Activity Right" to control access, "Utilities > Access Marquee Message Manager"	
SPOT	Coupons	Addition to Existing Feature	As an owner, I would like the progress slip for my rewards program to be customized. Including pieces remaining Support for level-based progress slips. If a next level is available and no reward is earned, the customer can receive a customizable printout (usually from the receipt printer) to show their progress towards earning the next level.	Company Settings->Customer Rewards Settings->Customer Rewards Profiles->Levels->"Print Progress Slip Towards		

				<p>this Level" checkbox.</p> <p>Company Settings->Customer Rewards Settings->Customer Rewards Profiles->Levels->"Progress Slip Template" button.</p> <p>Normal printing settings apply. NOTE: The customer must have a valid bag tag printer defined in Workstation Settings->Printing Settings->Printer Assignments. The progress slip template uses an enhanced bag tag layout.</p>		
SPOT	Credit Cards	Change	<p>Centralized transaction log to be in the database Modified CC module so that transaction logs are recorded in the database instead of the files.</p>	<p>There are no new settings. Existing settings regarding transaction logging are being left intact, in order to maintain backwards compatibility.</p>		<p>Existing CC log files will not be updated, nor will they be removed by the system (it is no longer aware of these). It will be up to the system admin to remove these after a reasonable time period.</p>
SPOT	CRM	Fix	<p>Comments were not printing on the CRM item report.</p>			
SPOT	Customer View	Fix	<p>An "Invalid use of null" error was occurring in the Web Requests screen when attempting to process UK customers that had changed information in CustomerConnect.</p>			
SPOT	Customer View	Fix	<p>After viewing/printing a statement from the AR-CC tab of Customer View, most of the screen was blank.</p>			
SPOT	Customer View	Change	<p>As an owner, I would like an option to prompt clerks for an email if the customer has previously refused to provide an email. Added function to periodically prompt the user for email addresses for customers who are either missing valid email addresses, or have previously refused to provide one. This is activated by setting the interval</p>	<p>Store Settings > Customer Settings > Refused Email Reminder Interval Type, set to 'None',</p>		

			type (see settings) to 'Days' or 'Visit', and the interval to a number greater than zero.	'Days' or 'Visits'. Store Settings > Customer Settings > Refused Email Reminder Interval, set to positive integer.		
SPOT	Email	Addition to Existing Feature	<i>As an owner, I would like to specify a different reply/from address for different types of emails</i> Added "Return Address" to most email event types, so this email address can be specified accordingly. Also added a "From" field to the batch email campaign system. If these fields are blank, the system will always fall back to the base "Email Settings > Return Address", and then if necessary the email address set up for the store under "Setup > Location Information".	Store Settings > Email Settings > (Event) > Return Address		
SPOT	File Manager	Fix	Fixed cosmetic issue with the file manager, where the full server path was still being displayed in the file copy/overwrite/remove confirmation dialogs.			
SPOT	General	Addition to Existing Feature	SPOT /setup now includes a /dbonly update feature. Use this when you want to update schema only (no other setup operations will occur).			
SPOT	General	Fix	SPOT server setup was timing out during certain database updates on large databases. The timeout period is extended now to 3600 seconds (previously was the default timeout of 30 seconds).			
SPOT	General	Fix	Minor UI fixes to Pay Period and Holiday scheduler setup screens.			
SPOT	General	Fix	The SPOT markin screens were unable to finish a hotel order if a previous hotel order had been split or saved without items.			
SPOT	General	Fix	Hotels configured to show item info on the hotel manifest were getting an error when the manifest was run.			
SPOT	General	New Feature	<i>As a SPOT user, I would like to style the application from a variety of themes (Phase I)</i> A preview of the new SPOT "Modern" style, to complement the SPOT "Classic" style, is now available. The style is currently available on the home page. To select the theme, select Tools->Styles->Modern.			
SPOT	General	Fix	Restoration manifests are now correctly sorting by department name.			
SPOT	General	Fix	Fixed issue with Tools->Services not launching properly when SPOT is in hotfix deployment mode.			
SPOT	General	Addition to Existing Feature	Users can now select multiple statements in the Statement View screen when performing statement operations such as printing, emailing, deleting, and reprinting invoices.			
SPOT	Home Page	New Feature	Added Alerts for Alterations Promised Today & Alterations Overdue, with corresponding searches.	Stored procedures are in defaults, but the		

				Alerts and Advanced Search definitions may need to be imported into their proper collections. Activation of the alerts is in the normal place in Store Settings > Site Defaults.		
SPOT	Home Page	New Feature	<i>As a manager I would like an Alert/Search to show me all open alteration orders</i> Added Alerts for Alterations Promised Today & Alterations Overdue, with corresponding searches.	Stored procedures are in defaults, but the Alerts and Advanced Search definitions may need to be imported into their proper collections. Activation of the alerts is in the normal place in Store Settings > Site Defaults.		
SPOT	Home Page	Addition to Existing Feature	The Home Page will now scale to larger screen sizes if the main SPOT browser window is enlarged or maximized.			
SPOT	Home Page	Addition to Existing Feature	The Route View and Hotel View screens will now resize with SPOT browser size changes.			
SPOT	Home Page	Addition to Existing Feature	A/R View Statements and Report View screens are now resolution independent.			
SPOT	Home Page	Addition to Existing Feature	Assisted Assembly screens are now resolution independent.			
SPOT	Home Page	Addition to Existing Feature	<i>As a SPOT user, I would like resolution independence for the Home Page and other primary views</i> The Home Page and all screens directly available from it will now scale to larger screen sizes if the main SPOT browser window is enlarged or maximized. This includes the Quick, Touch Screen - Extended and Keyboard markin screens, Rack/Process Step screen, Assisted Assembly screens, Order Pickup screen, A/R View Statements screen, Inventory Scan screen, and Reconciliation screen.			
SPOT	Home Page	Addition to Existing Feature	The Reconciliation screen is now resolution-independent.			

SPOT	Hotels	Fix	Hotels with more than 32767 customers were causing an error when a customer was added or removed.			
SPOT	Hotels	Fix	Updates to Store->Hotel Settings->Hotels->{hotel} were not populating in the database properly. This issue impacted hotel exports but does not impact the hotel manifest or hotel sales reporting.			
SPOT	Mapping	Change	As a SPOT user I would like to run my installed version of MapPoint (MapPoint 2006, 2009, 2011, or 2013) SPOT now adjusts to accommodate whichever supported version of Microsoft MapPoint is installed (versions 2006, 2009, 2011, or 2013 are currently supported).			
SPOT	Markin	Addition to Existing Feature	The Touch Screen - Extended markin screen will now support changing the screen size, and larger screen sizes will add an additional row of department buttons.			
SPOT	Pickup	Addition to Existing Feature	The Order Pickup screen will now support increasing the screen size.			
SPOT	Process Steps	Addition to Existing Feature	The Rack/Process Step screen will now support increasing the screen size.			
SPOT	Process Steps	Addition to Existing Feature	As a SPOT user, I would like resolution independence for Process Steps The Process Steps screen will now scale to larger screen sizes if the main SPOT browser window is enlarged or maximized.			
SPOT	Production	Addition to Existing Feature	An order may now be voided if Order View is entered from the Advanced Production Commitment Detail screen.			
SPOT	Quick	Addition to Existing Feature	The Quick screen will now support changing the screen size, and larger screen sizes will add an additional row of department buttons.			
SPOT	Reports	Fix	CRM Entries By Type - Fixes an issue with a data type mismatch on the Comments field rendering it missing.			
SPOT	Reports	Addition to Existing Feature	Added email presentation to "Lost Tuna" report.			
SPOT	Reports	Change	Updated Mobile Usage report to be compatible with Reports Queue.			
SPOT	Reports	Addition to Existing Feature	(Mobile Store Pickup Requests) - Displays all store notification pickup requests submitted through the mobile app during a specified date range. (Mobile Route Pickup Requests) - Displays all on-demand route pickup requests submitted through the mobile app during a specified date range.			
SPOT	Reports	Addition to	(Credit Card Discrepancies) - Report to show all transactions that sent to			

		Existing Feature	Paypros that do not have a corresponding SPOT transaction. That will include declined credit card transactions.			
SPOT	Reports	Fix	"Outgoing Summary - By Referral", "Outgoing Summary - By Clerk", "Outgoing Summary - By Month", and "Outgoing Summary - By Day" reports were generating a "Field name not known" error.			
SPOT	Reports	Change	Added last visit date to the route summary manifest.			
SPOT	Reports	New Feature	<i>As an owner, I would like a report to show department volumes/relative % by customer</i> A new report, "Department Usage By Customer", has been added to the Customer folder of Reports Gallery. It shows a breakdown by department of pieces, sales, and percentage of total sales for each customer in the selected store(s) for orders detailed during the selected date range.			
SPOT	Reports	New Feature	<i>As a manager, I would like to have a report that would display a customer's heat seals with full description</i> Added three new reports for HSL detail for a specified customer. Reports are for 1) All HSL entries, 2) HSL entries by creation date range, and 3) HSL entries by last scanned date range.			Customer will have to use the HSL Remap tool to make sure the new table column for Price Table is populated.
SPOT	Reports	Addition to Existing Feature	New Customer Verification Report - Intended for export to Excel. Displays common information about new customers within a selected date range. Used to verify information was entered correctly.			
SPOT	Reports	Fix	A/R statements not generating/exporting HTML-based attachments properly in the latest version. This is now resolved.			
SPOT	Reports	Fix	"Outgoing Summary", "Outgoing Summary - By Clerk", "Outgoing Summary - By Day", "Outgoing Summary - By Month", and "Outgoing Summary - By Referral" reports were not working if archive data was requested.			
SPOT	Routes	Fix	When a customer is reassigned to another store, the route assignment is removed. If there is more than one customer on the affected stop, that customer is removed from the stop. If there is only that one customer on the stop, the stop is removed as expected.			
SPOT	Routes	Fix	Orders posted in RouteTracMobile for route customers with valid credit cards on file but without an active A/R account were being placed in PNP status without attempting to charge the card.			
SPOT	Routes	New Feature	<i>As a route manager, I want to run multiple manifests in a single day and reprint as needed.</i> Added a new manifest option for a route manifest "Data Set/Snapshot Info" to the top of the route manifest parameters selection view. This new button invokes a view that allows the user to select between "New Manifest" (which is the default), "Time Range Specifier", "Supplemental Manifest" and "Reprint Manifest".	The following settings are suggested to have corresponding entries:		
				Store > Route Settings > On-Demand Time Ranges		

Selecting:

New Manifest is the default, and will cause the system to generate a manifest consistent with current functionality.

Time Range Specifier will allow the user to select a time range specifier (from the same list of specifiers viewed in the customer view Route Specific Route Rules), and the resulting manifest will show only those customers & scheduled visits matching that selection.

Supplemental Manifest will allow the user to generate a supplemental (or incremental) manifest, excluding all customer/order entries that may be present on earlier manifests for that route that day. A "New Manifest" will reset the system, and any subsequent "Time Range" or other "Supplemental Manifests" will be accounted for. A "Supplemental Manifest" will not be permitted for any given day that has not yet had at least one "New" or "Time Range" manifests run.

Reprint Manifest will allow the user to select any previously generated manifest and reprint it.

Any of these manifest types will still allow Detailed/Summary views, and the New, Time Range and Supplemental will still allow optimization.

Store > Route Settings
> Time Ranges

Since the 'On-Demand Time Ranges' have two aspects of each time range (pick-up & delivery), we must be able to tie each PU/DL pair to a single 'Time Ranges' entry. This is accomplished by matching a 'Time Ranges' entry to the beginning word(s) of a set of 'On-Demand' entries. See the following examples.

```
Time Ranges
      On-Demand
Time Ranges
-----
                -----
-----
Morning
      Morning PU

                Morning DL

Afternoon
      Afternoon PU

                Afternoon DL
```

Note that a 'Time Ranges' entry may not need to have a set of corresponding 'On-Demand' entries, but every 'On-Demand' entry should have a corresponding 'Time Ranges' entry.

SPOT	Search	Fix	The "Send Email" button in the Customer Lookup screen was using the same Alt-M hotkey as the "Email Address" lookup selection button. It now uses the Alt-E hotkey, and the "Extended Lookup" selection button uses the Alt-X hotkey.			
SPOT	Security	Fix	Using Menu->Time Clock->Change User PIN would successfully update the PIN but would not pass through the user's system rights so operations like Tools->Program Configuration could not be authorized.			
SPOT	Splitting	Addition to Existing Feature	<i>As a user or a customer, I want to see the reasoning for a split.</i> Added to a "Split Reason" selection to invoice splitting. This reason will be requested when splitting manually from the Invoice Split view, as well as the manual splits that may occur from the assisted assembly and conveyor operations views. Auto-splitting from the lot manager, conveyor and assisted assembly will simply indicate the auto-split and where it occurred, without prompting the user.	New collection to specify a list of possible split reasons, located at "Company Settings > Mark-in Settings > Split Reasons.		
Customer Connect	General	Fix	Changes in customer notification preferences made in CustomerConnect were not showing in SPOT in the change compare screen before entering Customer View; all notification changes will now show in the compare screen.			
Customer Connect	General	Fix	Fixed missing barcode on the print bag tag form.			
Customer Connect	General	Addition to Existing Feature	Added the ability to require a valid CCOF prior to being able to schedule a pickup request.			
Customer Connect	General	Fix	Fixed an issue with non-US postal codes being formatted incorrectly when a user views their information.			
Customer Connect	General	Fix	Fixed hiding of "Available Options" header if there are not any enabled email/phone notifications.			
Data Exports	General	Fix	Fixed Tools->Services not launching services properly. This was an inadvertent bug issued after making changes to use a shim-based launch.			This is a hosted-only problem and will not affect standalone customers.
ProductionTrac Legacy	General	Fix	Fixed issue where certain setting values were causing the abort of the persistence of production category settings, particularly those used by the ProductionTrac systems.			

ProductionTrac Legacy	General	Fix	All versions of ProductionTrac should now correctly indicate the current item step in the Visual invoice in SPOT.			
ProductionTrac PC	General	Fix	ProductionTracPC crashes when missing the setting for 'CommentSearchCriteria' in the config file. V1.04 sent 4/1/2013 resolves this, if the setting is missing. Including the setting, even if blank, will also resolve the issue.			
Route Mobile Client	General	Addition to Existing Feature	<p>As a RouteTracMobile user, I would like to scan any invoice as delivered no matter the stop.</p> <p>Changes:</p> <ol style="list-style-type: none"> 1) When "Scan Bags" is enabled, we had taken all bag quantity buttons from the main screen. Three of these are added back in: "0", "1", or "2+". These will always be "additional bags" and will still print the bag tickets. The highlighted button will not reflect scanned bags for that customer. 2) Update to RTM to allow the scanning of orders from any stop on the route. This is governed by a setting at the route level in SPOT. 3) When the scanning of orders from any stop is enabled, a button on the scan orders view will show up, allowing the user to toggle the dataset from all orders for all stops, and the current stop's orders only 4) When a bag scan occurs for a customer that does not belong to the manifest, but DOES belong to the route, the system will now add that customer to the manifest and accept the bag. 5) Added a 'Deliver' button to the "Scan Orders" view, allowing a user to highlight an order and toggle it between 'Delivered' and 'Not Processed'. 	Store Settings > Route Settings > Route > RouteTrac Mobile Order Scan, set to "Stop" or "Route".		

Build 6.1.1470

App	Area	Type	Comments	Settings	Rights	Required Changes
SPOT	Configuration	Change	<p>To protect against unwanted side-effects, the store mnemonic will be read only within SPOT.</p> <p>This field will be 'read-only' for all users from within the 'Setup > Location Information' view. To update the mnemonic, the user must access this information from within the meta-space browser, or direct to table.</p>	Setup->Location Information->Mnemonic.		
SPOT	Email	Fix	The "Email Visit Info" feature was not functioning properly with dynamic splitting.			
SPOT	Email	Fix	The @BILLEDACCTBALANCE token included in certain email templates was being replaced by the current posted balance instead of the latest billed balance.			
SPOT	Exports and Utilities	Addition to Existing Feature	<p>As an owner, I would like the data export file to retry sending a few times if our FTP site is having an issue.</p> <p>Data Export Service D will now retry FTP connection and data file</p>			

			transmission three times each if unsuccessful on the initial attempt.			
SPOT	File Manager	Change	<ul style="list-style-type: none"> • Add a refresh button (F5) to the file manager screen to update the latest. If you make a file change on your local box while in the file manager session you have to change folders in order to refresh the list. • Rename “Custom report folder” setting to “File Manager” • Rename “ Maximum File Size” to “ Maximum File Size (MB)” <ul style="list-style-type: none"> o Calculate the number in the field in MB o Limit the max field entry to a maximum size to reflect the data type • You cannot rename a file with a space in the file manager. • Remove the \\shares01\Shared from “Server folder” so that the user will only see \CompanyInfo • If you create a new folder the local client folder shows c:\\New folder\ • Add the option to multi select files for copy. • Setting to disable the ability to rename or remove root folders . This will be a list of folder names. 			
SPOT	Gift Cards	Change	<p><i>As a customer, I would like to use a combination of two or more Givex brand gift cards to pay for my orders without needing a deposit</i></p> <p>Order Pickup will now take multiple electronic payments, including Credit Card, Gift Card and Debit Card payments.</p>			
SPOT	Home Page	Change	Add connection name and minor tweaks to the About screen. Removed check to "Last backup" unless there is a backup path set.			
SPOT	Inventor y	New Feature	<p><i>As a manager, I would like basic merchandise inventory control</i></p> <p>Added a basic merchandise inventory control system. The manager is accessed via 'Menu > Store Management' and includes options for receiving new inventory, stock checks, inventory adjustments, store transfers, and update/modify prices.</p>	New entries in 'Company Settings > Merchandise Settings' for minimum, maximum, reorder threshold, etc. Also added settings for 'Track Inventory', which activates tracking for that item, 'Discontinued' and a category.	New right 'Inventory > Access Merchandise Inventory Manager'.	
SPOT	Markin	Fix	Standard Markin was popping up an errant "license not found" dialog.			
SPOT	Markin	Fix	Price later items were losing their price later attribute when Store->Markin->Department->Print ItemTrac was selected.			
SPOT	Markin	Fix	A price later alteration was losing its price later flag when used in combination with Tagging->Print-ItemTrac.			
SPOT	Messagin g	Fix	Instability with 3rd-party rich text control button bar repaired by removing control and replacing it by implementing a custom button bar.			
SPOT	Mobile	Fix	Mobile invitation code emailing was failing if the invitation code template could not be found.			
SPOT	Pricing	Fix	When using the cash rounding feature, certain amounts that ended in a 0			

			were not being properly rounded.			
SPOT	Printing	Addition to Existing Feature	Rewards and Incentives now include a field for the expiration date.	Marketing Incentives/Rewards template editor->Expiration Date data field.		
SPOT	Printing	Addition to Existing Feature	<i>As an administrator I want a resizable window for the document designer.</i> Resolution independence and layout improvements to the document designer.	Company Settings->Report/Printing Settings->Document Templates Store Settings->Route Settings->(Route)->Invoice Template Store Settings->Hotel Settings->(Hotel)->Invoice Template		
SPOT	Printing	Fix	Customer Information Slip had embedded 'tab' characters, that were not supported by the updated printing mechanism. This issue is now resolved, and no longer embeds those tabs.			
SPOT	Reports	Addition to Existing Feature	Customer Birthdays - Included email address. Now allows email presentations to be added to the report.			
SPOT	Reports	Addition to Existing Feature	Added four new reports for Merchandise Inventory control. Current Merchandise Inventory - Displays current merchandise inventory counts for the selected stores. Grouped by store then item category. Merchandise Inventory Activity Detail - Shows incoming/outgoing activity of merchandise items with comments or invoice numbers. Merchandise Sales Activity Summary - Shows sales and returns for each item within a specified date range. Grouped by store then category. Store Merchandise Reorder - Display list of merchandise items that need to be reordered based on the reorder threshold for each selected store.			
SPOT	Reports	Addition to Existing Feature	Added "Autodial CRM Entries" report. Shows Autodial CRM Entries within the selected date range. Grouped by call type, then by route if customer is on a route.			
SPOT	Reports	Fix	Hotel statement custom statements are confirmed working in the most recent SPOT build.			
SPOT	Reports	Addition to	The A/R statement layout that shows a running account balance	Store Settings > A/R		

		Existing Feature	(Statement3.rpt) now supports the "Show Item Info on Statements" and "Show Tag Info on Statements" configuration settings.	Settings > Show Item Info on Statements Store Settings > A/R Settings > Show Tag Info on Statements		
SPOT	Restoration	Fix	The RestoreNet text file was not generating properly in the recent registration-free versions of SPOT.			
SPOT	Search	New Feature	<i>As a user, I would like to single click to send an email to a specific customer.</i> A "Send Email" button has been added to the Customer Lookup screen. This will allow users to email directly from the Lookup screen without having to enter Customer View.			
SPOT	Setup	Fix	SPOT /setup was hanging up in version 6.1.1417.17 and higher. This was due to the decrypt and encrypt functions not being populated properly.			
SPOT	Timeclock	New Feature	<i>As an office manager, I would like to export timeclock data for a 3rd party payroll company</i> "Payroll Export - Summary" and "Payroll Export - Detail" reports have been added to the Time Clock folder in Reports Gallery. The former will show the total hours, total overtime hours, wages, and overtime wages for each employee, week, and labor category for the store(s) and date range/pay period selected; the latter includes the same information, but shows the individual time clock sessions that make up the summary data. Both reports include an Excel presentation option.			
Conveyor Client	General	New Feature	<i>As a conveyor customer, we would like the ticket to have a progress count for the visit (Example: 3 of 12)</i> Addition of a token for the assembly conveyor Metalprogetti bagging label to indicate total number of items on the original invoice. This will enable the ticket to read, for example, "3 pieces of an original total of 11 pieces".	In the SBSConveyorClient.exe.config, in the label definition section, a new token called '@VisitPcs' has been implemented. For those using '@ConvPcs' instead of '@Pcs', an equivalent '@VisitCnvPcs' has also been implemented.		
Conveyor Kiosk	General	New Feature	<i>As a kiosk owner, I would like the outer door to open only for validated customers.</i> Updated BCRead to be able to monitor two serial ports (MSR's), and tag swiped data accordingly. This new program is called BCRead2.exe. Updated Kiosk software to identify and validate the second port activity and open the door accordingly.	BCRead2 requires settings for 'Port B' and a 'Port B > Scan Identifier' of '2'. Leave the 'Port A > Scan Identifier' blank.		

				The only setting in the Kiosk that is required is one that determines if the outer door swipe will also activate the kiosk, or of the kiosk will require a second swipe inside to continue. This setting belongs in 'KioskSettings.config' and is called 'OuterDoorActivatesKiosk' (true/false).		
Customer Connect	General	Fix	Special cleaning instructions created in CustomerConnect as part of a pickup request were not creating a customer reminder when the request was accepted in SPOT. This has been fixed.			
Customer Connect	General	Addition to Existing Feature	<i>As a customer connect user I want to set notifications in either SPOT or Customer Connect seamlessly.</i> SPOT will now support the new notification types and methods sent from CustomerConnect.			
Route Mobile Client	General	New Feature	<i>As a RouteTrac Mobile user, I would like several enhancements.</i> Added to the mobile RouteTrac Manager: <ul style="list-style-type: none"> ' Added timeout to the SPOT connection & command methods ' Reminders popup was showing up after each selection of a bag quantity, this is now fixed ' Application will now reset when settings are changed, so you don't have to exit & reenter ' Added to sign-in screen an option to revise (lower) the truck mileage if more than one attempt is made to enter a lesser mileage value ' Added new setting (Scan Bags - Enable/Disable) that activates a new bag entry mode where bags can be either printed or scanned ' Added TimeSpecifier and TimeRange to manifest stop data, provided stop filter to select a specifier and view stops ' Added TimeSpecifier and TimeRange to the stop/customer view on main screen ' When settings are changed, the system will now reset, instead of forcing the user to exit and restart the application ' Added new settings tab, with options to enable/disable certain (main) display elements, including Time Specifier, Second Phone Number, Payment Type, Last Activity and Route Visit Days ' Added color-coded alert (when TimeSpecifier is displayed) that will light up when time-priority visits are not yet completed. In addition, the 	All settings changes are in RTM, and not in SPOT. There is a new timeout option in both the 'Host' & 'Local' tabs. In the 'Operation' tab, a new 'Scan Bags' option activates that new functionality. Note that activating this will force the 'Require Bag Quantity' option to be disabled. There is a new tab in the settings view, called 'Display' that will allow the user to switch in/out selected elements of the customer and stop info on the main display. All of the the 'Time Specifier' alert		The new 'Time Specifier' functionality will only function in the April 2013 (and subsequent) builds of SPOT.

			<p>"Pending Stops" button</p> <p>' will allow the selection of one of the TimeSpecifier options, and the stop navigation will then select only those filtered/unvisited stops.</p>	<p>and selection functionality is dependent on the 'Display Time Specifier' setting being activated.</p>		
Route Mobile Client	General	New Feature	<p><i>As a RouteTrac Mobile user, I would like several enhancements.</i></p> <p>Added to the mobile RouteTrac manager: A warning with mileage is vastly greater than previously entered mileage, and an option for the driver to print new messages dispatched from the store during the route session.</p>
