Release Notes for 7.0.10897

App	Feature	Type	Comments	Settings/Required Changes
SPOT	Activity Log	Fix	Alterations requiring extra processing days were not taking the store holiday schedule into account when adjusting the promised date.	
SPOT	AR	Fix	Invoices in PDF format emailed with statements were appearing as 3 identical copies of the same invoice. Also, the invoices were emailed as separate PDF attachments, but now they are combined into a single attached PDF.	
SPOT	AR	Fix	SPOT will now provide a specific explanation when trying to view or print an Invoice format statement when there is no activity.	
SPOT	Cash Control	Fix	Fixed the Use Any Cash Drawer right to be effective only when Cash Drawer Association is set to "Single Cashier" or "Workstation & Single Cashier"	
SPOT	Configuration	Fix	Fixed a problem where some settings in Program Configuration that are dependent on store names (such as conveyor Member Stores) are reset if the store names are changed.	
SPOT	Configuration	Fix	Setup > Location Information will no longer allow changing the store name or number to a value already used by another store in the same company.	
SPOT	Configuration	Fix	Fixed a possible error when using the Print Report button in Email Address Manager.	
SPOT	Conveyor	Fix	Corrected the description of the Conveyor - Local Name setting.	
SPOT	Customer View	Fix	New customers show duplicate signup dates if they were added to a rewards program when created in Customer View.	
SPOT	Gift Cards	Addition to Existing Feature	***Add the option for SPOT internal gift cards to not be combined with coupons or discounts*** SPOT internal gift cards can now be imported with a "DONOTCOMBINE" flag, which will cause SPOT to disallow the use of the gift card to pay for orders with coupons or discounts.	
SPOT	Localities	Fix	Fixed a problem that caused various problems when printing invoices on systems with Windows set to "Chinese (Traditional, Hong Kong SAR)" formats.	

SPOT	Notification Center	New Feature	**Notification Center - Update display of notifications** A Notification Center dashboard has been added to the Alerts and Recent Transactions tabs of the SPOT Home Page; which dashboard the user sees is controlled by a configuration setting	Workstation Settings > System Menu Settings > Default Tab Workstation Settings > System Menu Settings > Notification Center Scope
SPOT	Notification Center	Fix	Signups in the Notification Center were mistakenly showing customers as "Retail" if they signed up on a service plan.	
SPOT	Printing	Fix	The customer info slip was not printing all customer preferences if the default info slip template was being used.	
SPOT	Reports	Fix	Fixed a problem with email address verification that could incorrectly mark addresses as invalid.	
SPOT	Reports	Addition to Existing Feature	Added Locker KPIs report to Reports Gallery > Locker.	
SPOT	Reports	Addition to Existing Feature	Updated Customers with Ratings to now show all routes regardless of type	
SPOT	Reports	Change	**Existing SPOT Route-Related Reports to be compatible with SPOT Route Model 2.0.** Updated the following reports to work correctly with both routes and service plans: Customer > Customers by Group Customer > Customers with Rating Customer > Customer Profiling Customer > Inactive Customers - Route, No Sales Route > Bag Scans by Customer and Date Route > Bag Scans by Route by Day (Detail) Route > Bag Scans by Route by Day (Summary) Route > Route Conversions Route > Route Customer - In Store Orders	

			Route > Route Customer Expect Date	
			Route > Route Customer Usage	
			Route > Route Customers Sales	
			Route > Route Customers (Select List)	
			Route > Route Customers Delivery Settings Route > Route Customers	
			Route > Route Dashboard	
			Route > Route Discounts	
			Route > Delivery Comparison Analysis	
			Route > Route Outgoing Detail Route > Route Outgoing Summary Route > Route Overdue Orders	
			Route > Route Store Mismatch	
			Route > Route Referral Source	
			Route > Route Retention	
			Route > RTM - Non-Delivered Orders by Date	
			Route > RouteTrac Customer Detail Route > RouteTrac Customer Summary Route > RouteTrac Summary	
			Sales > New Route Customer Sales	
			Sales > Sales by Subdivision	
			(Other reports in the Route category did not need modification.)	
SPOT	Reports	Change	Disabling splitting by department and department group is not a recommended configuration for this reason. Added to the description of Company > Mark-in Settings >Splitting Settings the following: "NOTE: If at least one of Department Group or Department must be selected or most Sales reports will not work as intended!"	

SPOT	Routes	Fix	SPOT Delivery Tab will now show the Valid-On days of a route stop in preference to showing the days defined in customer specific route rules unless there are no valid days selected for the stop. Previously the days specified in customer specific route rules were displayed even if they would be overridden by the stop. If the stop specifies no days but there are days specified by customer specific route rules those will display in blue text.
SPOT	Routes	Fix	SPOT Manifests will generate lat/lon coordinates on all manifests stops (assuming a valid address) if Telogis is enabled. This will help retain distance discrepancies for those using RouteTrac devices.
SPOT	Search	Fix	Route customers belonging to a multi-customer stop that are not the principal customer linked to the stop are not showing in "All Routes" customer searches.
SPOT	SMS	Fix	If an employee replied to an SMS sent from SPOT, the reply didn't show in the Notification Center
Conveyor Kiosk	General	Fix	Fixed SPOT.Kiosk in some cases will not returning to Front Page after a failed customer lookup
OTS	General	Fix	Fixed a problem where changing between stores without leaving Program Configuration caused incorrect warnings about concurrent changes.
OTS	General	Fix	Fixed a problem where the "Quick Promise Day Priority" setting was affecting orders during creation of a Quick. It will now only be checked during detail as intended.
API	General	Change	***API - Geocoding in Germany*** API - Added a more complete support for localized address formats and requirements
Delivery Console	General	Fix	Fixed issue where on-demand customers with cancellations were still showing on the route plan/manifest
