

Release Notes for 7.0.12882

App	Feature	Type	Comments	Settings/Required Changes
SPOT	Coupons	Fix	Customer award coupons were not honoring "Cannot Combine - Coupons" settings.	
SPOT	Reports	Fix	CRM Entries by Type report now sorts by the actual EventDateTime, previously sorting by the character conversion of EventDateTime.	
SPOT	Reports	New Feature	New Bag Assignment for Reassignable Bags by Customer and Date, similar to Bag Scans By Customer And Date report but for reassignable bags only	
SPOT	Reports	Change	The Web Requests > Customer Signup Attempts report can now be emailed automatically via Reports Queue.	
SPOT	Reports	New Feature	The "Coupons Summary - OTS" report has been added to the Adjustments folder of Reports Gallery	
Docs	General	Addition to Existing Feature	A "Video Tutorials" option has been added to the Help menu in the SPOT client. This will take the user to the SPOTposMedia YouTube channel.	
SPOT	Coupons	Fix	Subscription coupons were not honoring the "Cannot Combine - Discount Groups" selections	
SPOT	Coupons	Fix	Auto-coupons were not honoring "Cannot Combine - Discount Groups" and "Cannot Combine - Coupons" settings.	
SPOT	Credit Cards	Fix	Subscription renewal service could leave a NULL value in credit card sequencing table if multiple rows existed for the same store, which could prevent customers from pickup up orders with a credit card.	
SPOT	Email	Addition to Existing Feature	"Order Delivered Email" and "Order Delivered SMS" scheduled task types now support the @BAGS template token for users of RouteTrac Mobile	
SPOT	Pricing	Fix	Subscription activation orders (and other merchandise orders) were mistakenly applying the minimum order surcharge.	
SPOT	Reports	Addition to Existing Feature	New column added to the Route Conversions Report, OriginalStore, will show the name of the store prior to the conversion if different then now.	
SPOT	Routes	Fix	On-demand route scheduler was showing deleted routes in the dropdown route selection	
SPOT	Routes	Addition to Existing Feature	If SPOT is using the "Request Visit (API)" method of scheduling route visits, the user can now schedule a customer for delivery or pickup on a Service Plan different from the one the customer is assigned to.	

SPOT	SMS	Change	When composing an SMS message in SPOT (to a single customer or a batch), if the message exceeds 160 characters the character count will be colored red and have the note "(extra cost)" after it. This is because messages longer than 160 characters must be split up into multiple segments. See this Twilio support article: https://support.twilio.com/hc/en-us/articles/223133407	
Conveyor Kiosk	General	Fix	Kiosk pickups where the order has a non-zero balance and payment fails will now leave the order in Sold as Pickup Not Paid status instead of Ready.	
SPOT Scheduler	General	Fix	"Locker Order Delivered" email and SMS scheduled tasks could time out and fail in large databases
