

Release Notes for Version 7.0.7311

App	Feature	Type	Comments	Settings/Required Changes
SPOT	Adjustments	Fix	An Invoice Mode adjustment was being applied incorrectly to the second order in the visit.	
SPOT	AR	Fix	A/R > Apply Payments > Single Payment will now obey the Send SMS on Declined CCOF Payments setting.	
SPOT	Configuration	Fix	Fixed - Zones (Routes) saved from the Route Manager will now update SPOT Store Settings as well as the table.	
SPOT	Configuration	Fix	Fixed a problem that sometimes caused customer group setup to display the associated route's price table rather than the customer group's price table.	
SPOT	Configuration	Addition to Existing Feature	API calls that return invoice lists or individual invoice detail now include a StatusDisplayLabel property, so that CustomerConnect customers can see customized invoice status labels.	CustomerConnect Settings > Invoice > Counter > Quick Status Label CustomerConnect Settings > Invoice > Counter > Detailed Status Label CustomerConnect Settings > Invoice > Counter > Ready Status Label CustomerConnect Settings > Invoice > Counter > Sold Status Label CustomerConnect Settings > Invoice > Delivery > Quick Status Label CustomerConnect Settings > Invoice > Delivery > Detailed Status Label CustomerConnect Settings > Invoice > Delivery > Ready Status Label CustomerConnect Settings > Invoice > Delivery > Sold Status Label
SPOT	Configuration	Fix	Fixed a problem with some settings (such as Time Clock Edit Reasons) being inappropriately limited in length.	
SPOT	Conveyor	New Feature	<p><i>As a SPOT User with a conveyor I want to do my own special arm configuration</i></p> <p>Added special arm settings to program configuration for Metalprogetti conveyor owners. This will greatly reduce the need to develop custom stored procedures for this purpose. These settings should be used judiciously. Directing a large proportion of the orders to be assembled to the special arm instead of the automatic bagger means adding greatly to the amount of manual labor to be performed.</p>	Company > Conveyor Settings > [Conveyor Name] > Operation - Special Arm Number: Number provided by Metalprogetti. 0 means "Disabled" Company > Customer Settings > Assemble to Special Arm: Can select Preferred Customers (VIP) or Reusable Bag Customers. These correspond to the buttons in the bottom right of Customer View > General Company > Invoice Settings > Redos Assemble to Special Arm Company > Mark-in Settings: All of the following have a new Assemble to Special Arm attribute: Price Tables Order Comments

				Departments Categories Items Item Comments Upcharges Alterations Modifiers (except incremental modifiers)
SPOT	Conveyor	Fix	Fixed - Performance issues with "Conveyor Offload"	
SPOT	Credit Cards	Fix	Fixed - Refunds via terminal (in some systems) are generating an indexing error	
SPOT	Customer View	Addition to Existing Feature	As a SPOT user, I would like a way to handle international mail order customer addresses. Customers may now be tied to an "International" locality, which does not enforce any address/phone number/locality formatting.	Store Settings > Customer Settings > Show International Locality
SPOT	Email	Fix	Fixed a problem where email payment receipt templates longer than 32767 bytes may fail to send.	
SPOT	General	Fix	Touchscreen Extended mark-in will no longer recalculate promised dates for items added after an order promised date is set.	
SPOT	General	Fix	As a SPOT user, I would like Customer Merge to exclude customers that belong to multiple brands based on the assigned stores in the CustomerConnect tenant Auto-merge will not present customers as duplicates if they are present in stores that are part of different brands within the enterprise.	
SPOT	General	Fix	Fixed - SPOT - Route Manifest Reprint, when using optimization/driving directions, the system does include the "End Route" stop on the reprinted dataset.	
SPOT	General	Fix	Fixed inappropriate "Split Invoice or Reissue Tags" prompt which could lead to creating a 0 piece invoice with the department group set to "Not Split"	
SPOT	Home Page	Fix	Fixed a problem where the Splits Today alert/search was not displaying a split that happened on the current date from an order originally marked in on a prior day.	
SPOT	Localities	Addition to Existing Feature	Saudi Arabia as a locality in SPOT	
SPOT	Markin	Fix	Fixed an error when attempting to finish an invoice while a preset promised date is in effect.	
SPOT	Markin	Fix	Fixed a problem where department promised dates were not present on the visual invoice when a preset promised date is in use.	
SPOT	Messaging	Change	A SPOT user may now reply to a SMS in the Notification Center or Customer View even if the customer doesn't have batch SMS notifications enabled, provided the incoming SMS is within the last 2 days.	
SPOT	Messaging	Fix	Fixed another problem that unnecessarily limited the maximum number of recipients of a SPOT message	
SPOT	Messaging	Fix	Fixed a scenario that would cause a run-time error when viewing email campaign details.	

SPOT	Notification Center	Addition to Existing Feature	<i>As an MDC Mobile User, I would like route sign-up customers go to pre-route-assignment location to be assigned by an employee.</i> SPOT can now be configured to bypass assigning a new delivery customer to the default route, and instead require a manual route assignment in SPOT before the customer can make pickup requests.	CustomerConnect Settings > Signup > Enforce Manual Route Assignment
SPOT	Notification Center	Fix	Fixed a problem that could cause the notification center button to display an incorrect count.	
SPOT	Notification Center	Addition to Existing Feature	<i>As a SPOT Notification Center user I would like sortable columns</i> The user can now click on column headers in Signups and Account Changes tabs of the Notification Center to sort the list by that column in ascending/descending order	
SPOT	Notification Center	Fix	Fixed a possible run-time error in the Notification Center when using the SMS button.	
SPOT	Order View	Fix	Limited the length of the ItemTrac line on the visual invoice to 31 characters to avoid wrapping when a conveyor status is added, which would otherwise cause modifiers to not be visible. Slightly changed formatting to reduce space used.	
SPOT	Pickup	Fix	Alter-only items were not allowing a partial deposit to be collected in Order Pickup.	
SPOT	Printing	Addition to Existing Feature	<i>As a SPOT User I want to print customer custom fields on detail invoices and visits</i> Customer custom fields can now be printed on detail invoices and detail visits. Both the name and the value of the custom fields are available. These must be added to the templates inside a band created on Invoice Client CustomFields CustomField.	
SPOT	Printing	Fix	On Invoice templates, the Invoice > PriceAt data field will now be "Step" if an alteration or item on the invoice is priced at step, and blank otherwise. (Previously Invoice > PriceAt was always blank). This will allow using the evaluate-if feature and a text field to implement a custom message on the invoice when there is a price-later present.	
SPOT	Production	Addition to Existing Feature	<i>As a SPOT User I would like Quality Control Flags for Redos</i> Quality Control flags can now be defined for redo reasons.	Company Settings > Mark-in Settings > Redo Reasons > (Redo Reason) > Quality Control Flag Settings
SPOT	Quick	Fix	Fixed the promised date calendar on Quick Receive to be usable more than once.	
SPOT	Quick	Addition to Existing Feature	<i>As a SPOT user, I would like a solution for when a drive up customer is not dropping off but I already went to quick</i> New "Fast Switch from Quick to Pickup" setting. If selected, the "Finish" button on Quick Receive is replaced with a "Pickup" button. Clicking it will switch to Pickup for the currently selected customer. When at least one item is added to the quick, the button will be again become "Finish" and fast switching is no longer available.	Store > Mark-in Settings > Fast Switch from Quick to Pickup
SPOT	Rack	Addition to Existing Feature	<i>As a SPOT user, I would like the 'Include Other Scanned Location' feature to allow me to continue scanning</i> Added "Other Rack Locations Display Time" setting. If "Display Other Rack Locations" is enabled, this setting will automatically close the dialog after the specified number of seconds. 0 seconds means to display the message forever. Also, there is now an "Other Locations..." link added to the Rack screen that can be clicked to review the last displayed other locations info.	Store > Racking Settings > Other Rack Locations Display Time
SPOT	Reports	Fix	Fixed a problem that prevented Word Merge report presentations from functioning for Hosted customers.	

SPOT	Reports	Change	<p>As a SPOT user I would like excel report presentations to set number formatting to avoid displaying in scientific notation</p> <p>Excel presentations of reports will now set the Excel display format for any column with "hour" in the name to "0.00" (round to 2 decimal places). This will cause Excel to display (for example) "0.02" in a cell instead of "1.6666666666667E-02" in time clock related exports. This is a change in the display format only. Excel still retains the actual value in each cell.</p>
SPOT	Reports	Fix	Fixed - New Route Customer Report - doesn't correctly account for customers who had current orders when transferred to the route.
SPOT	Reports	Fix	Fixed: statement5 when exported to CSV did not have the sub-account name.
SPOT	Routes	Fix	<p>Engineering - Investigate solution for route manifest reconciliation screen printing in XenApp 7</p> <p>Printing the manifest reconciliation screen will now allow the customer to select a printer rather than always using the default printer.</p>
SPOT	Routes	Fix	Fixed - Customer view dinging (indicating an internal error) with an error while trying to set route-tab defaults
SPOT	Routes	Fix	Fixed - Route Manifest is not calculating the drive times correctly during the optimization process. Also fixed so non-optimized manifests with driving directions also calculate times.
SPOT	Routes	Fix	Fixed - new API-based route scheduler (SPOT) shows an incorrect date with an en-route proposed visit date/time
SPOT	Routes	Fix	Customer Lookup - Stop Days now show Customer-Specific when required
SPOT	Routes	Fix	Fixed - (SPOT & API) - Customers added to a route with "On-Demand" defaults will also select "Use Route Rules", so the customer will function as desired on that route.
SPOT	Routes	Fix	Route orders were being sold without posting to A/R if they had previously had declined CCOF payments and the clerk selected the option to send them to A/R after another CCOF decline in the Post Orders screen
SPOT	Search	Addition to Existing Feature	ADDED - "Orders With Balance" alert and advanced search. Lists all in-process and ready orders with a balance due.
SPOT	Search	Fix	Clicking on the "Picked Up Today" bubble in the Workflow tab presents a list of invoices, but the customer name is not included as a column as in other views.
SPOT	SMS	Fix	Saving an SMS template from Customer View was disallowed even though the Save Template button was visible.
SPOT	SMS	Fix	<p>As a SPOT user, I would like tokens for push notifications to allow any combination of upper and lower case characters</p> <p>Email, SMS, and push notification templates used by SPOT Scheduler Service will now work correctly even if substitution tokens are not all in upper case.</p>
SPOT	SMS	Addition to Existing Feature	<p>As a SPOT user, I would like my SMS notifications for delivery to be grouped into a single sms message.</p> <p>Added the Order Sold SMS scheduled task type. This task looks for sold orders (picked up, or route posted) within the current calendar day and constructs an SMS notification for the customer with the combined details. The orders are then marked as processed so they are not considered for future notifications.</p> <p>Order Sold SMS may be configured for counter, route, or locker orders, same as Order Ready SMS. Standard email tokens can be used, along with a special token: @SOLDLOCATIONS. This gives a list of the rack locations of the orders (intended for unusual locker scenarios).</p>

Conveyor Kiosk	General	New Feature	As a kiosk operator I want a report to track kiosk dropoffs New report: Reports Gallery > Conveyor > Kiosk Dropoffs. Unlike Kiosk Dropoffs Not Detailed, this displays dropoffs over a date range without regard to their current status.	
Conveyor Kiosk	General	Fix	Fixed a problem with the Kiosk Server that was causing the an incorrect time to be recorded for a kiosk pickup.	
Conveyor Kiosk	General	Fix	Fixed a problem causing the Kiosk Dropoffs Not Detailed report to always give no data.	
CustomerConnect	General	Addition to Existing Feature	As a CustomerConnect user, I would like the schedule pickups and delivery functions to be identical to the mobile app CustomerConnect pickup request logic now enhanced to match the feature set of the MyDryCleaner Mobile apps.	
Dashboard	General	Fix	Fixed an possible error with graph widgets in Dashboard when a store's location settings does not have a time zone selected.	
Mobile\MDC Mobile Client	General	Fix	As an MDC Mobile user, I would like the address validation to only occur when address fields are changed or added Change address validation to only occur when address fields are changed or added	
Mobile\MDC Mobile Client	General	New Feature	Prompt for a new password if last 4 phone digits are used for login	
Mobile\MDC Mobile Client	General	Change	As an MDC Mobile user, I would like to be prompted for a new password if last 4 phone digits are used for login Prompt for a new password if last 4 phone digits are used for login	
Mobile\MDC Mobile Client	General	Change	Added the ability to allow customers to pick a home store upon sign up. Plus, the ability to change the home store via editing their profile information. Fixed layout and highlight of the store cell	
Mobile\MDC Mobile Client	General	New Feature	As an MDC Mobile user, I would like the signup process to allow me to select my home store Added the ability to allow customers to pick a home store upon sign up. Plus, the ability to change the home store via editing their profile information.	
Mobile\MDC Mobile Client	General	Change	Percentage brand upcharges listed as whole amounts	
Mobile\MDC Mobile Client	General	Fix	Validating primary address if delivery address is missing. Fixed address validator.	
Mobile\MDC Mobile Client	General	New Feature	As an MDC Mobile user, I would like to disable address validation Added option to disable address validation:	AppSettings_Views_General->ViewSettingsGeneral->DisableAddressValidation
Mobile\MDC Mobile Client	General	Change	As an MDC Mobile user, I would like a "Price Tokenized String" setting with {{PRICE}} as default. Allows for something like "{{PRICE}} and up" Added setting to determine how to display the price column in the Pricing tab. Settings.Views.Pricing.PriceTokenizedString	
Mobile\MDC Mobile Client	General	Fix	My Orders – do not display prices until the order is in 'Detail' status	
Mobile\MDC Mobile Client	General	Fix	Fixed Delivery Address Modified / In Process Orders message is appearing when it shouldn't	

Mobile\MDC Mobile Client	General	Fix	Show alert "Delivery address cannot be changed ..." when there are orders in process or ready
Mobile\MDC Mobile Client	General	Fix	MDC - When Pickup Bypass is off, a new visit request indicates a failure, even though the call succeeds. Fixed.
Mobile\MDC Mobile Client	General	New Feature	Add prompt to update a credit card if missing/expired (pickup request screen)
Mobile\MDC Mobile Client	General	Fix	Fix layout on login screen (for iPhone 5s) Display the new welcome screen only at the first time you load the app and log in
Mobile\MDC Mobile Client	General	Fix	Fix email validator to allow email addresses with hyphens in them (-)
OTS	General	Fix	Fixed an error which happened when using the New Correspondence button in Dashboard.
Reports Queue	General	Fix	Fixed a problem where the Management > Summary - Specific Item Detail report would not display upcharge amounts.
RouteTrac	General	New Feature	UI to preview the route created with manifest Optimization is added
RouteTrac	General	Fix	RT - When loading the list of potential manifests to load, the system will now no longer "skip" such days as invalid.
RouteTrac	General	Change	Remove the "Scan to Pair" button, dialogs and barcodes from Login screen
RouteTrac	General	Fix	RTM (Device) - Scan to load on truck will now update the invoice status & history.
RouteTrac	General	New Feature	Implemented multi customers stop Make the count indicator "Green" when all orders have been delivered Show prompt once on delivery screen if a customer has notes and pictures
RouteTrac	General	Change	Remove the "Scan to Pair" button from login screen and keep the logic in case we need to add this back in the future.
RouteTrac	General	Fix	Show VisitRequestComments, VisitRequestLocation, VisitRequestInstructions & VisitRequestAdditionalInfo on the RTM "Notes" view
RouteTrac	General	Fix	RouteTrac Client - enhanced retrieval functions so manifest data will load faster
RouteTrac	General	Addition to Existing Feature	<i>As a RouteTrac Mobile App user, I would like options to allow full control over accuracy methods for tracking</i> Added keys to app settings to allow full control over accuracy methods for tracking: "GeolocatorDesiredAccuracy" -> default value 10 (meters) "GeolocatorMinimumDistance" -> default value 50 (meters) "GeolocatorMinimumTime" -> default value 30 (seconds)
RouteTrac	General	New Feature	Make the count indicator 'Green' when all orders are scanned
RouteTrac	General	New Feature	New Bag Scanner dialog
RouteTrac	General	Fix	Trim barcode when bag tag is scanned that contains the '..' prefix
RouteTrac	General	Change	Added a single quick select in select reason dialog
RouteTrac	General	Change	Remove the "Scan to Pair" button from login screen and keep the logic in case we need to add this back in the future
RouteTrac	General	Fix	Check code with customer and current lat/long coordinates and addresses in posts (Post Visit / Bag / Order, etc)
RouteTrac	General	Change	Change current and customer address

RouteTrac\RouteTrac Manager	General	New Feature	Manifest route start / end addresses preset to store address by default;	
SPOT API	General	Addition to Existing Feature	For edit profile mode added "Disable All Notifications" option to notifications screen	
SPOT API	General	Change	<i>As an API user, I would like customers that signup for routes, but the route falls into a different store than the default store, should be assigned to the route store instead of the default store</i> MDC Mobile/CustomerConnect customers who sign up for route service should be assigned to the store in which the route is located instead of the default store.	
SPOT API	General	Addition to Existing Feature	A StoreName field has been added to the CustomerDetail API call.	
SPOT API	General	Fix	Fixed app feedback so that ratings without comments will be recorded properly.	
SPOT API	General	Fix	Fixed issues with: 1) Duplicate addresses in RTM if there are multiple on-demand/en-route requests (non-route customers only) 2) Duplicate addresses in RTM if there are multiple on-demand (scheduled before manifest) requests (non-route customers only) 3) En-route requests showing erroneous ETA time 4) Added specific flag if the RTM requested stop consists of a non-route customer	
SPOT API	General	Fix	API (CustomerConnect & MDC app) - Customer route assignments will force the route's parent store assignment as well.
