Release Notes for 7.0.9936

App	Feature	Type	Comments	Settings/Required Changes
SPOT	Configuration	Fix	Collections in Program Configuration that do not actually support hiding the items will no longer allow using the Hide button.	The collections that currently support hiding are: Departments, Categories, Items, Modifiers, Upcharges, TaxAuthorities, NotificationTypes, Coupons, Restoration Rooms, Payin Reasons, Payout Reasons, Cash Credit Adjustment Reasons, Credit Card Adjustment Reasons, Debit Card Adjustment Reasons, A/R Adjustment Reasons, and Frequent Buyer Points Adjustment Reasons.
SPOT	Conveyor	Fix	Fixed a rare problem where valid orders would not be matched (customer <Unknown>) in conveyor operations.	
SPOT	Conveyor	Addition to Existing Feature	*As a SPOT user I need to offload the first X number of route orders by stop order/rev stop order* Conveyor Operations > Offload now has a "Max Order Count" filter that will limit the offload to at most that many invoices. Ordering set by other options is still obeyed, so, for example, if you set Max Order Count to 50 and offload a route in reverse stop order, you will get up to 50 orders starting from the last stop on the route.	
SPOT	Conveyor	Addition to Existing Feature	*As a SPOT user, I would like a conveyor operation option to offload orders within a date range selection* Conveyor Operations > Offload can now filter an offload by the date when the orders entered Rack/Ready status.	
SPOT	Conveyor	Fix	Fixed a scenario where a legacy conveyor special arm stored procedure was not used even though the DB Offload Override setting was enabled.	
SPOT	Conveyor	Change	*As a Conveyor User I want to be able to print when splitting multiple orders from Assembly Orders* When splitting from Conveyor > Operations > Assembly Orders SPOT will now prompt to reprint the original invoices, print the new invoices, print both, or print none; even if multiple orders are selected. The workstation still must have appropriate printing settings configured as before.	

SPOT	Coupons	Addition to Existing Feature	**As a SPOT user, I would like coupons to be restricted to the first visit only** The ability to restrict a coupon to a customer's first visit has been added to SPOT.	Company Settings > Mark-in Settings > Coupons > (Coupon) > Restrict to First Visit
SPOT	Customer View	Fix	Improved loading time of Customer View when the customer has many route exception entries.	
SPOT	HSL	Fix	Fixed a problem where describe and price modifiers were not considered when checking if a required modifier is missing.	
SPOT	Markin	Change	**As a SPOT user, I would like to enter room numbers up to 99999 for the customer type of hotel** The legacy Hotel customer type will now allow up to 30 digits in a room number when Room Number Entry is Numeric Only. (Alpha-Numeric already has a 30 character limit, this brings Numeric Only to parity with that).	Store > Site settings > Hotel Settings > Room Number Entry
SPOT	Order View	Fix	Empty invoices (with no items) created by redo will now be voided automatically.	
SPOT	Pickup	Fix	Amounts on the paper currency buttons in the tender screen were 1000 X too high in Denmark locality	
SPOT	Pickup	Fix	Fixed a case where SPOT would ask twice if the user wanted to print a receipt.	
SPOT	Printing	Fix	Fixed phone numbers with leading zeros (valid in some locations) printing without the leading zeros on invoices.	
SPOT	Printing	Addition to Existing Feature	**As a SPOT user, I would like an option to prevent invoice printing on the customer level** Customer View > Special Flags now includes a "Disable Printing Invoice at Detail" flag. As the name suggests this only suppresses printing invoices during detail. For example, the Reprint Invoice button or printing during AssistedAssembly are not affected.	
SPOT	Printing	Fix	Fixed incorrect printing of 128L barcodes when Unicode text is present.	
SPOT	Printing	Fix	Fixed problem with invoice copy override settings when printing invoices after prepay.	

SPOT	Reports	Addition to Existing Feature	**_As a SPOT User I want a report to track coupons with zero value_** Added "Zero Discount Coupons" and "Zero Discount Coupons (Select List)" reports to Reports Gallery > Adjustments.	
SPOT	Reports	Fix	API - Customer Record Changes report will now work when bypass web requests is enabled. The final three columns on the report will always be blank in this case as they are not applicable when bypass web requests is enabled.	
SPOT	Reports	Fix	Fixed the New Customers by Signup User presentation of the New Customers report to obey the store grouping selection.	
SPOT	Reports	Fix	Marketing by Department report will now run properly when multiple departments are selected.	
SPOT	SMS	Fix	Fixed a problem that could cause Order Delivery SMS to be sent more than once when the payment declines.
